March 30, 2017

DISCONTINUED INTERNATIONAL THERMOELECTRIC CHILLERS

More than 10 years ago, Server Products introduced our first thermoelectric chiller, and the line has expanded since that time. Unfortunately, we've also discovered that while thermoelectric chilling technology is exciting and offers significant space savings over compressor units, it's a challenge to build a unit that will deliver the results and quality expected from Server at a sensible price point for operators.

After considering all possible options, we have decided to discontinue our line of thermoelectric chillers, effective immediately.

International part numbers affected include: 86261, 86259, 86262, 86257, 86256, 86258, 86092, 86091, 86095, 86042, 86041, and 86045.

Though not a direct alternative to thermoelectric cooling, we offer a variety of equipment that utilizes either HoldCold™ Jars or Eutectic Ice Packs. The Eutectic material of HoldCold™ Jars holds food cold for up to 12 hours – simply place the jar in the freezer to refreeze. Eutectic Ice Packs stay frozen inside insulated units for up to 4 hours.

For more info on alternative chilling methods, contact Customer Service at spsales@server-products.com.
