How to serve fresh all day long.

Smart, safe and precise food warmers.

SMART FOOD WARMERS SERVE BETTER.

IntelliServ™ Warmer

Perfect for plate finishing with toppings and sauces, the IntelliServ™ Warmer features an end-operated digital display for instant feedback of heat setting and status. This water-bath food warmer only needs 8" of counter space while utilizing 1/3-size food pans.

Soup Warmers – Single Inset

5, 7 or 11 quart stainless steel, water-bath soup warmers are NSF listed rethermalizers – quickly heating food to safe serving temperature. Temperature-sensing thermostats provide accurate, even heat to maintain superior flavor and texture from first serving to last.

Soup Warmers – Twin & Triple Inset

5-quart stainless steel, water-bath soup warmers are NSF listed rethermalizers – quickly heat food to safe serving temperatures. Temperature-sensing thermostats provide accurate, even heat to maintain superior flavor and texture from first serving to last. Available with enticing merchandising graphics and eye-level signage to promote soup programs.

3 SMART REASONS SERVER WARMERS ARE DIFFERENT

1) Temperature-Sensing Thermostat

No guessing – maintain precise temperature even as product is depleted, unlike a “low-high” or “1–10” controller.

2) NSF Listed for Rethermalization

Ensure food is quickly heated through HACCP “danger zone” of 165°F.

3 Inset Lid

Maintain quality and keep counters clean; hinged lid returns condensation and flavor to the food.
