

NEW SEAL FOR 1 OZ STAINLESS STEEL PUMPS

Original Seal
83003 Rev F

New Seal
83003 Rev G

Effective August 1st, 2013, Server is replacing the current machined seal assembly (83003 Rev F) on all 1 oz stainless steel pumps with a new molded Teflon® seal (83003 Rev G). This change does not affect pricing. The new seal is intended to look slightly different to ensure proper identification. The new seal can be identified with its natural (translucent) color and red silicon o-ring.

The original seal (83003 Rev F) will not be available for 1 oz stainless steel pumps, even on a special order basis. This seal change is being done for the following reasons:

- Better cost maintenance
- Assure product consistency
- Maintain product quality
