

REMOTE DISPENSER REDESIGN

At Server Products, we are always searching for ways to help simplify your operation, which is why we introduced the Remote Dispenser to serve as an alternative method to CO₂-powered dispensing systems.

Four part numbers were required for the old style dispenser: a single and twin model for 1½ gallon pouches with 16mm fitments (p/n 85781, 85782) and a single and twin model for 3 gallon pouches with 38mm spouts (p/n 85783, 85784).

With the redesign, we were able to simplify this by adding the Quick Connect feature that allows the dispensing tube to adapt to each style pouch. This eliminates the need for four separate part numbers.

Pouch supports for both pouches will be the same size, as shown in the picture below. Twin models will include a support rack.

Effective June 1, 2017, part numbers 85781 and 85782 will be discontinued. Part number 85783 will represent the single dispenser (1 pouch, 1 pump) for both pouch styles, and 85784 will be the twin dispenser (2 pouches, 1 pump).
