

Whipped Topping Can Coolers

Update Bulletin

Always in search of ways to improve our products, we've updated our Whipped Topping Can Cooler lid and insert to improve manufacturability, eliminate an extra part and help control manufacturing cost.

The new design eliminates the need for multiple parts and closely resembles our fountain jar lids, creating cohesiveness when used with other Server items. While the old design was a two-step installation, the new design is a one-piece, drop-in assembly with safer, rounded edges exposed to operators. Part numbers will remain the same.

This change will effect all models:

- (87523) Countertop station with black jar
- (87524) Drop-in station with black jar
- (82846) Can cooler kit with black jar
- (82847) Can cooler kit with white jar

With any questions, please contact Customer Service at spsales@server-products.com.
